

# ABSTRACT

The invention is created in order to resolve said problems.

(means for accomplishing said object)

The device for removing waterdrop of umbrella is constituted such that a number of water absorption members with elastic property at certain intervals radially in the inserting opening of umbrella of device body, inserting space is in the central part of a number of water absorption members ,thereby closed rainy umbrella is into the inserting space inserted, umbrella cloth is inserted into the clearance between the each adjacent each water absorption member ,then waterdrops on the umbrella cloth can be absorbed and removed by sliding inserted umbrella in the direction of insertion of umbrella, said device does not need such energy as electric energy,and water absorption is performed certainly and within only short time. In the device foundation promotion system the server who is connected preferable network performs processing of device foundation owner recruitment and advertiser recruitment on the device with advertisement, processing of acceptance of proposal of device foundation owner and advertiser ,and processing transmittance of information necessary for real device manager and promotes foundation of the device for removing waterdrop effectively and spreads the device.
